

The following Listing of Claims will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS:

1-5. (Cancelled).

6. (Currently Amended) A mixer circuit comprising:

an amplification unit having an input terminal and an output terminal, and amplifying a signal applied to the input terminal to output the signal to the output terminal;

a mixing unit having first, second, and third input terminals, first and second output terminals, the third input terminal being connected to the output terminal of the amplification unit, the mixing unit mixing signals respectively applied to the first and second input terminals with a signal supplied to the third input terminal, to output respectively the mixed signals to the first and second output terminals; and

a current source being configured to provide a specific quantity of current to the third input terminal of the mixing unit, and being connected to the second output terminal of the amplification unit and the third input terminal of the mixing unit,

the quantity of current being provided to the third input terminal of the mixing unit being equal to the specific quantity of current provided by the current source and a quantity of current provided by the amplification unit.

7. (Previously Presented) The mixer circuit according to claim 6, wherein the amplification unit includes,

an amplification element having a first terminal that forms the input terminal, a second terminal that forms the output terminal and a third terminal, wherein the quantity and direction of current flowing from the second terminal to the third terminal are varied on the basis of the level of a voltage applied to the first terminal; and
a degeneration impedance connected between the third terminal of the amplification element and a voltage source.

8. (Original) The mixer circuit according to claim 7, wherein the amplification unit further includes a capacitor connected between the first and second terminals of the amplification element.

9. (Previously Presented) The mixer circuit according to claim 6, wherein the mixing unit includes,

a first amplification element having a first terminal that forms the first input terminal, a second terminal that forms the first output terminal and a third terminal, wherein the quantity and direction of current flowing from the second terminal to the third terminal are varied on the basis of the level of a voltage applied to the first terminal;

a second amplification element having a first terminal that forms the second input terminal, a second terminal that forms the second output terminal, and a third terminal connected to the third terminal of the first amplification element to form the third input terminal, wherein the quantity and direction of current flowing from the second terminal to the third terminal are varied on the basis of the level of the voltage applied to the first terminal; and

Appl. No. 10/775,234
Amendment dated December 20, 2005
Reply to Office Action of September 20, 2005

first and second load impedances respectively connected between the second terminals of the first and second amplification elements and a voltage source.

10-13. (Cancelled).
